# WEEKLY HEALTH REPORT

## NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

### MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on a duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

### MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

### STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

### EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

## COMMENT ON CURRENT TRENDS

MORBIDITY FROM: All Causes:

(See Chart on page 3.)

Morbidity from all causes during the week ended 1 February showed little change, being reported at 622 admissions per thousand troops per annum, as compared with 627 during the preceding week.

Injury:

(See Chart on page 3.)

Injury admissions decreased from 29 per thousand troops per annum in the week ended 25 January to 28 per thousand in the current week. Highest rate was that reported from the Eighth Service Command (34 per thousand), ranging down to 18 per thousand in the Fifth Service Command.

Diseases:

(See Chart on opposite page.)

Morbidity from all diseases in the United States as a whole during the week remained substantially unchanged at 594 admissions per thousand troops per annum. However, the rate in the Third Service Command moved sharply upward again as incidence of common respiratory diseases in that area continued to increase.

Respiratory Diseases:

(See Chart on opposite page.)

The rate for colds, influenza, etc., increased during the week (179 per thousand to 186 per thousand) to the highest point reported this winter. These rates for the corresponding periods last year were 188 and 195 per thousand (the latter figure representing last winter's peak incidence). Rates in 1944, moving downward from peak incidence of about 600 per thousand experienced in mid-December, 1943, were 332 and 274 per thousand.

This rate increased sharply in the current week in the Third Service Command (250 to 320 admissions per thousand troops per annum), the Fifth Service Command (103 to 124 such admissions), and the Military District of Washington (390 to 439). Morbidity continued highest in the Military District, and lowest in the Fifth Service Command.

Admissions for all forms of primary pneumonia remained at 16 admissions per thousand troops per annum; however, the rate for primary pneumonias other than atypical moved from 5.4 to 6.4 admissions per thousand troops. In the corresponding periods of last year this rate was 4.4 and 4.7 per thousand troops, while it fell from the winter's peak incidence of 13.7 to 10.3 in these weeks two years ago.

## NONEFFECTIVE RATE

CONTINENTAL UNITED STATES

## PATIENTS REMAINING IN HOSPITAL

CONTINENTAL UNITED STATES

## COMMENT ON CURRENT TRENDS (CONT.)

Primary pneumonia admissions (for all forms) increased in the Third, Fourth, Fifth and Eighth Service Commands and the Military District of Washington; (where the rate reached 37 admissions per thousand troops).

Venereal Diseases:

New admissions for non-EPTS venereal diseases decreased during the "pay-day" week ended 1 February to 61 per thousand troops per annum, from the rate of 69 per thousand reported in the previous week. (These rates are normally lower during the first week of the month, increasing through the third or fourth report period.) Morbidity from these causes decreased or remained substantially unchanged in all service commands except the Third, where the rate moved from 79 to 102 admissions per thousand troops per annum; incidence ranged downward from the high Third Service Command figure to 35 such admissions in the First Service Command and the Military District of Washington.

Other Communicable Diseases:

Incidence of diarrhea and dysentery decreased from 4 to 3 admissions per thousand troops per annum. A high rate of 23 in the First Service Command reflects 24 cases of dysentery, unclassified, reported by Lovell General Hospital.

NONEFFECTIVE RATE:

(See Chart on page 6.)

The noneffective rate for personnel stationed in the continental United States is estimated at 39.9 per thousand troops per diem for the week ended 1 February as compared with 35.9 per thousand for the corresponding week of 1945.

PATIENTS REMAINING UNDER TREATMENT: 1 FEBRUARY 1946:

(See Chart on page 6.)

The number of patients remaining in hospital in the Zone of Interior, including patients transferred from overseas, decreased during the week to 146,792 as compared with 153,221 at the end of the previous week.

The number of neuropsychiatric cases remaining was 10,371 or about 700 less than at the end of the previous week. Nonbattle injury patients remaining numbered about 24,971. The battle casualty patients remaining decreased by about 2100 to 35,489.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

(See Chart on page 8.)

In the week ended 1 February there were 4568 enlisted personnel discharged by CDD (about the same as the previous week). These discharges included 130 CDD's accomplished at Air Force medical activities. Among these CDD's were 809 neuropsychiatric cases, about 60 less than in the previous week.
